More advanced

Continuous Wave (CW) Doppler

Detect blood flow with high velocity and help doctors diagnose with more clinical information.

Tissue Doppler Imaging (TDI)

Tissue Doppler imaging is a novel echocardiography technique that directly measures myocardial velocity. Systolic TD measurements assess left and right ventricular myocardial contractile function. Diastolic TD values reflect myocardial relaxation.

Triplex

Triplex combines B, color, with PW to help the user make diagnosis more conveniently and more accurately, help to improve the efficiency

Auto IMT Function

Automatically traces the intima, and measures the thickness of the intima. This allows you to measure the intima faster, more easily and more accurately.

Super Needle

With Super Needle, clinicians can see needle inside tissue more clearly during medical procedures. Needle angle up to $\pm 30^\circ$

Without Super Needle
Needle is Not clear

With Super Needle
Needle is Better Visualized
